Examiner's Reasons for Allowance

The following is an examiner's statement of reasons for allowance: The claimed invention is free of the prior art of record because the prior art of record does not teach or fairly suggest a method of stimulating antibody dependent cellular cytotoxicity to enhance the elimination of IgE-bearing B cells comprising the administration of an anti-IgE antibody that binds to membrane bound IgE, but does not induce histamine release, and the administration of an immune stimulatory oligonucleotide.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Examiner's Comments

The definition of immune stimulatory oligonucleotide ("ISO") is provided on page 2 (paragraph 5) through page 4 (paragraph 8) of the instant specification. The instant invention is not rendered obvious by the cited references of Chang, Carson, Schwartz and Idusogie (Office action mailed 10-2-03) because the combined teachings of the prior art do not teach or fairly suggest a method of enhancing the elimination of IgE bearing B-cells by administering anti-IgE antibodies in combination with the administration of CpG containing ISO's, whereby antibody dependent cellular cytotoxicity (ADCC) is stimulated.
